Kashif Jamal Ahmed

Senior UI/UX Designer | Product / Mobile App Designer | User Experience | User Interface Design

+971 52 273 8427 kashif.jml786@gmail.com https://linkedin.com/in/kashifjml Dubai, UAE

Portfolio showcasing UI/UX case studies, design systems, and product design work
https://kashifj.github.io/

PROFESSIONAL SUMMARY

Hands-on Senior Product & Mobile App Designer with 18+ years of experience building complex B2B financial platforms, iOS/Android mobile applications, enterprise data tools, and scalable design systems. Blends strategic product thinking with deep execution expertise across high-fidelity UI/UX design, interactive prototyping, mobile interaction patterns, and front-end development (HTML/CSS/JavaScript/jQuery).

Leverages AI tools across the design process—utilizing generative AI for rapid ideation, research synthesis, automated workflow efficiency, and smart component generation. Proven track record of owning end-to-end user journeys for market intelligence web and mobile platforms—from discovery to build collaboration and front-end execution.

Expert in designing AI-driven conversational interfaces (such as ChatIQ) and governing cross-platform design systems (Tokens, KOI Design System) that boost delivery efficiency by 30%–40%. Passionate about creating frictionless, touch-optimized, and accessible (WCAG) digital experiences that bridge business goals, technical feasibility, and user needs.

CORE SKILLS

Design Tools Figma | Sketch | Adobe CC | Miro | Jira | Confluence | Prototyping Tools

AI-Design Tools Figma AI / Make | UX Pilot | Relume | Claude Design | Adobe Firefly | Flowstep

Technologies HTML | CSS | CSS Animations | JavaScript | jQuery

Design Systems Tokens | Components | Governance | Documentation | Accessibility (WCAG)

AI-Driven UX Conversational Interfaces | Intelligent Workflows | Data-Driven Experiences

UX Strategy & Leadership Design Vision | Roadmapping | Stakeholder Alignment | UX Metrics

Product Design Enterprise UX | Interaction Design | Information Architecture | Mobile UX

Research & Validation User Research | Usability Testing | Journey Mapping | Personas

Collaboration Cross-Functional Leadership | Design Ops | Mentorship

PROFESSIONAL EXPERIENCE

User Experience Designer

S&P Global | October 2022 - Present | Dubai, UAE

- **ChatIQ (Conversational Financial AI Platform)**
  - **User & Problem:** Designed for financial analysts, asset managers, and corporate strategists who needed to pull, synthesize, and compare complex financial metrics without manually navigating deep database hierarchies or building complex queries.
  - **Owned Deliverables:** Designed end-to-end conversational workflows, multi-turn prompt interface layouts, responsive chat containers, tabular data card displays, citation popover overlays, and dynamic visual chart outputs.
  - **Key Design & Trust Decisions:** User research revealed high skepticism regarding raw AI answers in risk-sensitive financial contexts. To establish trust, I designed inline citation badges anchored to underlying SEC filings and financial reports, paired with an interactive source inspection panel that lets analysts trace every figure back to its exact source snippet before exporting.
  - **Engineering & Implementation:** Partnered daily with front-end engineers and AI/LLM developers in agile sprints. Built interactive prototypes in Figma and HTML/CSS to specify token-streaming UI states, prompt-loading skeletons, error handling fallback states, and structured data tables. Successfully shipped to live production on the Market Intelligence platform.
  - **Impact & Result:** Reduced data retrieval times for multi-step financial inquiries from minutes of manual searching to seconds, directly boosting user task completion efficiency and workflow throughput.
- **CIQPro Mobile App (iOS / Android)**
  - **User & Problem:** Built for mobile financial professionals, portfolio managers, and executives who required immediate, on-the-go access to breaking market news, watchlist alerts, stock monitoring, and financial filings while away from their desktop workspaces.
  - **Owned Deliverables:** Designed end-to-end mobile app navigation architecture, touch-optimized financial data cards, real-time news feeds, watchlist management screens, interactive stock chart views, and biometric authentication flows.
  - **Key Design & Testing Decisions:** Usability feedback during TestFlight beta releases showed that dense financial data tables failed to render legibly on mobile viewports. I redesigned tabular data into collapsible card-based layouts with prioritized key metrics (price, change, volume) upfront, allowing users to drill into deeper financial metrics with a single gesture.
  - **Engineering & Implementation:** Partnered with iOS and Android mobile development teams to define native touch patterns, haptic feedback specs, dark mode support, and responsive chart scaling. Regularly conducted mobile build testing via TestFlight to validate UI accuracy and performance prior to App Store/Google Play releases.
  - **Impact & Result:** Expanded platform utility beyond the desktop, delivering a seamless, high-performance mobile experience that kept investors informed and enabled critical market tracking on the move.

- **CIQPro Next Gen (Enterprise Market Intelligence Modules)**
  - **User & Problem:** Built for institutional investors and equity analysts who needed to customize high-density data workspaces, compare multi-company financials, and manage market monitoring dashboards without screen clutter or visual fatigue.
  - **Owned Deliverables:** Personally designed core web layouts, module configurations, side-by-side data comparison tables, flexible filtering toolbars, custom dashboard widget spaces, and interactive high-fidelity prototypes.
  - **Key Design & Testing Decisions:** Usability testing indicated that default enterprise tables hid critical deep-level metrics, forcing excessive tab switching. Based on feedback, I introduced configurable drawer panels and inline column customization, allowing users to compare primary financial KPIs on a single viewport without losing row context.
  - **Engineering & Implementation:** Worked alongside front-end React developers to review implementation accuracy, establish layout density tokens, validate responsive breakpoints, and resolve edge cases during sprint handoffs.
  - **Impact & Result:** Delivered intuitive, scalable page layouts that reduced layout navigation friction and simplified daily workflow density across core market intelligence surfaces.
- **KOI 2.0 Design System (Governance & Tokenized Architecture)**
  - **User & Problem:** Created for cross-functional product designers and UI engineers building across disparate Market Intelligence web and mobile products who suffered from inconsistent visual UI components, code redundancy, and delayed sprint delivery.
  - **Owned Deliverables:** Led the design, component tokenization, variant structure, interactive state definitions, accessibility guidelines (WCAG 2.1 AA), and usage documentation for the core Figma component library.
  - **Key Design Decision:** Restructured component variants using standardized design tokens (spacing, typography, color palettes, elevation) and strict component specs, establishing strict layout governance and clear interaction guidelines across all light/dark theme surfaces.
  - **Engineering & Implementation:** Collaborated directly with Design System engineers to sync Figma component properties with production React/Native codebases. Used coded prototypes to test component behavior, keyboard accessibility, and state transitions prior to engineering release.
  - **Impact & Result:** Standardized cross-platform UI consistency, directly improving design-to-development delivery efficiency by 30%–40% and drastically reducing engineering rework on recurring interface patterns.

Principal UI/UX Engineer

Netsol Technologies | June 2021 - March 2022 | Lahore, Pakistan

- **Ascent 2.0 (Enterprise Financial Lease & Asset Management Platform)**
  - **User & Problem:** Designed for corporate leasing officers, credit risk managers, and financial institutions who needed to process complex asset financing applications, credit assessments, and lease calculations without getting bogged down by fragmented legacy interfaces.
  - **Owned Deliverables:** Personally owned the UI/UX architecture and core module redesign, including loan origination workflows, lease calculation tables, credit approval dashboards, interactive UI component libraries, and functional prototypes built in Angular, TypeScript, and SCSS.
  - **Key Design & Research Decisions:** Contextual research and user feedback revealed that credit officers were losing time switching between separate screens to cross-reference customer risk data and lease terms. I introduced a multi-pane split layout and inline calculation preview drawers, allowing users to adjust interest rates and payment terms while viewing real-time credit score impact on a single screen.
  - **Engineering & Implementation:** Led front-end execution by writing modular Angular components, SCSS styling, and TypeScript interaction logic. Partnered directly with back-end engineers and domain product managers to align API data payloads, handle complex form state validation, and ensure pixel-perfect production implementation.
  - **Impact & Result:** Streamlined multi-step lease application flows, significantly reducing task completion time for credit evaluations and establishing reusable component patterns across core platform modules.
- **Team Leadership & Process Optimization**
  - **Role & Responsibility:** Managed and mentored a cross-functional UI design and front-end engineering team across sprint planning, design quality reviews, and technical execution.
  - **Adaptability & Agile Execution:** Adapted workflows to accommodate shifting domain requirements and tight client deadlines, establishing standardized design handoff guidelines, reusable Angular component standards, and code review practices.
  - **Impact & Result:** Elevated overall team execution quality, reduced design-to-code turnaround times, and ensured seamless collaboration between UX design and back-end development teams.

Senior UI/UX Engineer

S&P Global | July 2011 - June 2021 | Islamabad, Pakistan

- **Investor Relations & Corporate Workspaces Platform**
  - **User & Problem:** Designed for corporate executives, investor relations officers, and financial analysts who needed to track market performance, communicate earnings data, and manage investor workflows across complex financial dashboards.
  - **Owned Deliverables:** Personally owned the end-to-end design lifecycle—from initial wireframes and user task flows to high-fidelity UI designs and interactive coded functional prototypes (xslt, razor, HTML, SCSS, JavaScript, jQuery).
  - **Key Design & Testing Decisions:** Usability testing highlighted that analysts were bogged down by multi-step data export flows and dense navigational menus. I redesigned core task flows to introduce quick-action toolbars and inline data preview panels, reducing click-depth and simplifying complex navigation paths.
  - **Engineering & Implementation:** Partnered closely with Product Managers and global front-end development teams. Delivered comprehensive design specifications and working code prototypes to validate component interactions and ensure pixel-perfect production builds.
  - **Impact & Result:** Successfully launched platform-wide task flow redesigns that improved workflow efficiency, enhanced navigation usability, and maintained strict web accessibility (WCAG) standards across major financial touchpoints.

Graphics Lead - Team Lead

White Wings Consultants | April 2010 - June 2011 | Islamabad, Pakistan

- **Enterprise Money Transfer & Remittance System**
  - **User & Problem:** Designed for financial transaction agents, remittance operators, and retail end-users who needed to execute high-volume cross-border money transfers, process currency conversions, and verify transaction statuses quickly and securely.
  - **Owned Deliverables:** Personally owned the user experience architecture, wireframing, high-fidelity UI design, and interactive coded prototyping (HTML, CSS, jQuery) for core money transfer modules, recipient management flows, and agent transaction dashboards.
  - **Key Design & Research Decisions:** Analysis of agent workflows revealed high error rates and processing delays caused by cluttered multi-field payment forms. I redesigned the remittance entry flow into a step-by-step progressive disclosure wizard with real-time exchange rate calculation previews and instant validation, reducing input errors.
  - **Engineering & Implementation:** Led front-end delivery by building responsive CSS/HTML layouts and interactive jQuery prototypes. Collaborated directly with back-end software engineers to translate static mockups into fully functional production templates, ensuring seamless API integration and visual fidelity.
  - **Impact & Result:** Significantly improved remittance agent processing speed, streamlined user task completion across complex financial transaction modules, and established foundational design standards for enterprise client applications.
- **Team Leadership & Client Alignment**
  - **Role & Responsibility:** Supervised and mentored a team of graphic and web designers, managing project allocation, design reviews, and quality assurance across multiple client accounts.
  - **Stakeholder Collaboration:** Facilitated direct requirement-gathering sessions with external clients and stakeholders, translating business goals into clear user journeys and technical front-end specifications.
  - **Impact & Result:** Enhanced overall team productivity, ensured project delivery within tight deadlines, and maintained consistent UI/UX quality across all client deliverables.

Graphics Lead - Team Lead

ESOLPK | October 2008 - September 2009 | Islamabad, Pakistan

- **Interactive Corporate Branding & Multi-Client Web Applications**
  - **User & Problem:** Designed for enterprise clients and their end-customers who required cohesive, professional digital brand identities and standardized web touchpoints to build credibility and streamline customer engagement across disparate digital channels.
  - **Owned Deliverables:** Owned the visual design language, user interface layouts, interactive branding guidelines, digital asset libraries, and functional front-end code (HTML, CSS, JavaScript) for multiple corporate websites and digital media assets.
  - **Key Design Decision:** Identified inconsistencies in client visual assets across various web touchpoints. I established comprehensive, interactive digital design systems and UI component specifications, enforcing standardized typography, color tokens, and layout grids across all client platforms.
  - **Engineering & Implementation:** Built cross-browser-compatible front-end code and interactive UI prototypes. Worked directly with back-end developers to ensure front-end templates were seamlessly integrated into client content management systems and custom web applications.
  - **Impact & Result:** Delivered consistent, scalable digital brand identity frameworks across diverse client portfolios, improving UI consistency and accelerating front-end production timelines for client deliverables.
- **Team Leadership & Client Stakeholder Management**
  - **Role & Responsibility:** Led and mentored a team of graphic and UI designers, overseeing project task distribution, design quality assurance, and design-to-development handoffs.
  - **Stakeholder Collaboration:** Communicated directly with key client stakeholders to extract product requirements, present visual design concepts, and align technical feasibility with commercial objectives.
  - **Impact & Result:** Streamlined client approval cycles, enhanced design team execution speed, and maintained high standards of visual and technical design quality across all projects.

*I have worked with **Pi Sigma Group** and **Shifa College of Medicine** – to avoid a full laundry list above, I've kept it to last five work experiences.*

KEY ACHIEVEMENTS

Awards, Employee Recognition

Recognized as Employee of the Year for three consecutive years (2017–2019). Awarded the Creative Collaborator Award in 2018 and won first place in the Logo and Poster Design Competitions in 2017.

Optimized Design Process

Streamlined the design process by implementing a new design system, reducing delivery times by 30% across departments.

AI & Innovation

Delivered AI-driven UX solutions (ChatIQ) enhancing user productivity and data accessibility

Improved Team Productivity

Enhanced team productivity by 40% through strategic workflow adjustments and improved communication practices.

PROFESSIONAL TRAINING

Problem Solving and Decision Making

Lahore University of Management Sciences | March 2019 | Lahore, Pakistan
